The 2014 Professional Technical Talk Series:

The Green Journey Ahead

(SPM CPD: 4 POINTS / PEB: PDU to be Advised)
Accredited by PE Board CPD Programme

Synopsis

As Singapore embarks on its next phase of sustainable construction after rapid uptake and dramatic improvement in the industries’ green building capabilities, new challenges will emerge going forward as in a land scarce island with higher density of construction and closely packed high-rise blocks located adjacent to major motorways. Natural ventilation and façade heat gain in the urban tropics pose thermal comfort as well as visual comfort issues to the building occupants and new good passive designs and strategies are needed. How will vertical greening, sky-rise greenery and cool voids affect the new built environment? As the buildings go higher in our tropical climate, the climate change worldwide, global warming and urbanization have brought about a higher incidence of lightning thunderstorms that require greater building design considerations.

About the Speaker

Er. Ng Eng Kiong is the President of the Singapore Green Building Council (SGBC) for the term 2013/15 and a Founding Board Member. He has more than 30 years’ experience in the mechanical & electrical engineering consultancy and building industry. Er. Ng started his career with the Housing and Development Board (HDB) and held several senior management positions during his time with the HDB from 1974 to 1989.

Er. Ng is currently the Managing Director of Squire Mech Pte Ltd, one of Singapore’s leading M&E consulting practices. He was instrumental in raising the firm’s profile with numerous projects, clinching many Building and Construction Authority (BCA) Green Mark Awards and achieving the BCA Built Environment Leadership Awards 2009, Gold Class. For his dedicated efforts in improving productivity of construction project sites, Er. Ng has been recognized as a BCA Certified Construction Productivity Professional (Honorary).
