Leadership in Green Building
Lecture Series 08 -
Green BIM in Planning, Design & Construction

Green building is rapidly transforming the design and construction industry in Asia. A growing number of industry practitioners are embracing the advantages of building information modeling (BIM) to provide immediate insight into how design decisions impact building performance and critical strategy for making projects greener. This session will explore some of the exciting advances of Green BIM.

2-Day BUILD SMART Conference

Conference Day 1 – 16 May 2012
• Innovative use of materials and equipment
• Smart design and management

Conference Day 2 – 17 May 2012
• Advancing with BIM & Construction IT

As part of the overall efforts to improve productivity for the built environment, the Building and Construction Authority (BCA) of Singapore will be organising the Singapore Construction Productivity Week from 14th to 18th May 2012, featuring 3 key events: (i) Skilled Builders and BIM Competition, (ii) Build Smart Conference and (iii) BuildTechAsia 2012 (an exhibition on construction machinery, building materials, BIM and IT services).

At the 2-day Build Smart Conference, renowned speakers from USA, Japan, China and Singapore will share best practices and provide in-depth details into exemplary projects which have successfully adopted productive methods of construction. There will also be showcase of how materials and equipments, smart construction design and management, as well as BIM and construction IT can help to boost construction productivity, thereby improving the bottom-line of your organisation.

WORLD WORKPLACE ASIA CONFERENCE & EXHIBITION
2012

It is projected that by 2020, 2.2 billion people will live in Asian cities. The need for forward-thinking infrastructure planning and efficient facility management to meet increasing residential, commercial/industrial, power/water supply and transportation demands is critical for Asia’s continued and successful growth.

The 3-day events will include (i) high-level plenary sessions by renowned regional business leaders and industry experts, (ii) exhibition, and (iii) on-site green facility tours. Through these high impact sessions of keynote addresses and panel discussions, participants will be able to gather insights into the shift of the demand for space & assets towards the Asia Pacific region in the coming years. The conference is also an excellent platform to network with fellow practitioners and exhibitors for latest products, services and innovations available for the industry.
