Ensuring Safe Design and Construction – Keeping UP with the Changes
(In Compliance with Building Control Act & Regulations)

Introduction
In a densely built-up area like Singapore, special attention should be paid to ensure construction works are designed and carried out safely, so as not to compromise the safety of the workers, the public, as well as the surrounding buildings. It is therefore important for the stakeholders of the industry to comply with regulations and follow good practices when carrying out design and construction works.

Objectives
In this seminar, experienced speakers from regulatory agencies such as Building and Construction Authority (BCA), Ministry of Manpower (MOM) and National Environment Agency (NEA) will share on the common contraventions detected on sites and the enforcement actions taken to reduce such incidents. Information on how proper design and construction works can be carried out such that the works will not cause danger to the public/workers or damage to the surrounding properties will also be shared. Speakers will also share on any new or upcoming changes to the regulations with the industry players. Through this seminar, we hope to raise the safety standards of our industry and shape a safe built environment for Singapore.
