3 - 4 AUGUST 2015 PRODUCTS SHOWCASE

5 AUGUST 2015 SITE TOURS

FEATURED SPEAKERS

ERIK JASPERS
CTO, Princon International B.V.

LOOKING AT BUILDINGS AS SMARTER SYSTEMS

We often hear that buildings are becoming “smarter.” The questions that Facility Managers should be asking are: In what ways can we become smarter? What benefit is there to becoming smarter? How do we go about it, and what strategies should we use to get smart projects off the ground?

In this session, Erik will highlight the current technologies that can improve utilization, operation and maintenance efficiencies. He will present the business case for implementing these types of technologies.

GLENN FRY
Solutions Development Director, EMEA, Johnson Controls

DIGITIZATION OF FACILITY MANAGEMENT (FM)

With global changing environments, many organisations are pushing for the digitization for work processes. This will enhance decision making process and reduce cost by enabling interpretation and analysis of data. The challenges faced by the FM industry is the ability to decode the industry today and forecast the future. Therefore, it is important for the FM industry to continually innovate to deliver real values to the end users.

In this session, the speakers will provide insights into recent growth areas for digitization in FM and the possible future trends. They will also elaborate on how to prepare organisations to leverage on the full potential of digitizing FM and future technology.
