1-Day Seminar on Ensuring Safe Design and Construction - Contraventions and Enforcement (In Compliance with Building Control Act & Regulations)

In a densely built-up area like Singapore, special attention should be paid to ensure construction works are designed and carried out safely, so as not to compromise the safety of the workers, the public, as well as the surrounding buildings. It is therefore important for the stakeholders of the industry to comply with regulations and follow good practices while performing construction works.

In this seminar, experienced speakers from regulatory agencies such as BCA, MOM and NEA will share on the common contraventions detected on sites and the enforcement actions taken to reduce such incidents. Information on how proper design and construction works can be carried out such that the works will not cause danger to the public/workers or damage to the surrounding properties will also be shared.

CPD Points
PEB: Pending
BOA-SIA: 4 CPD Points
IES & ACES (for RTOs/REs): 6 STUs
WSH-CPD (for WSH Officers): 7 SDUs

Date: 26 Apr 2013

BCAA – IFMA FM Conference 2013

Improving Productivity and Sustainability in Facilities Management

The BCAA-IFMA FM Conference 2013 is the fourth year jointly organised by BCA Academy and the Singapore Chapter of International Facility Management Association.

As part of our continued efforts to improve the conference, this year’s focus ‘Improving Productivity and Sustainability in Facilities Management’ is poised to deliver new research, best practices and trends as identified by Facility Management thought leaders. This year, the conference is co-located with the inaugural International Facility Management Expo (iFaME) 2013 which will bring together the expertise and talents that makes for excellent facility management.

CPD Points
PEB – To be confirmed
BOA-SIA – To be confirmed
SPM – To be confirmed

Date: 7 & 8 May 2013
For more information, click here!

4-Evening Course on Geotechnical Instrumentation for Engineers

Geotechnical instrumentation plays an important role in the design verification and safety monitoring of geotechnical works. Being a specialised area, engineers and QPs need to be more familiar with instrumentation used for deep excavation, their installation monitoring and interpretation to ensure safety of excavation works and adjacent structures.

CPD Points
PEB - Pending
IES & ACES (for RE/RTO) - Pending

Date: 8, 10, 15 & 17 May

2-Day Workshop on Managing Project Teams Effectively

Very often, project managers, site supervisors, facility managers and building executives are hassled by their site agents, subcontractors, material suppliers and building tenants over all kinds of issues and problems relating to inadequate site facilities, slow work progress, poor building maintenance, high rental fees, etc. Normally, people who lack effective management and interpersonal skills would only exacerbate such situations. Furthermore, the stress of handling difficult people and challenging situations can result in low productivity, low morale and high absenteeism within the team or an organisation.

Through interactive activities, role play and case studies, participants will learn how to apply the provided tools coupled with their interpersonal skills to deal with all types of work behaviour problems.

**CPD Points**
PEB: Pending
BOA-SIA: Pending

**Date:** 13 & 14 May 2013

2-day Course on Renovation for Public Housing

Under HDB Registered Renovation Contractors' (RRCS) scheme, all registered holders of existing HDB registered renovation contractors and their authorised persons must successfully complete BCA’s Certificate in "Renovation for Public Housing" before their next renewal of registration with HDB.

**Date:** 13 & 14 May 2013 (Mandarin Class)
For more information, [click here!](#)
4-Evening Certification Course for Site Investigation For Engineers

This course will provide practicing engineers a good insight into the importance of geotechnical site investigation and its process. Participants will also learn to interpret soil investigation reports to ensure safety of geotechnical works and surrounding structures.

CPD Points
PEB - Pending
IES&ACES (for RE/RTO) - Pending

Date: 21, 23, 28 & 30 May 2013

Event supported by BCA

Workplace Safety and Health Forum:
Managing Mega Construction Projects Safely - 2012 London Olympics and Others

This forum aims to: (a) share and interact with the audiences on the key successful factors of the London Olympics Projects in the overall health and safety performance, and (b) explore the relevant and practicable system, practices and/or technology to be adopted from the London Olympics Projects from the local perspectives.

Date: 9 May 2013
