OVERVIEW

Established since 1977, ICP has been one of the major contributors to Malaysia’s construction industry
development. ICP piles have been used extensively as foundation piles for power stations, highrise
buildings, civil engineering works, bridges, marine structures, harbours, schools and government project,
etc.

ICP piles are also exported to Brunei, Singapore, Bangladesh, Sri Lanka, the Middle East, Indonesia, Paki-
stan, Philippines, Vietnam, Myanmar, USA, Canada, New Zealand, Maldives and Samoa. ICP piles are also
supplied to many projects in Southern China from our plant in Jiangmen, China.

Recently ICP has introduced new technology in manufacturing of prestressed spun concrete piles. The
new technology aims to reduce our dependent on labor workforce and reduce wastages.

In 2011, ICP has also introduced grade 90 concrete as a continual improvement on ICP’s product.

ICP’s product has been certified locally by IKRAM and also overseas by Singapore Accreditation Council
(for Eurocode, EN 2061: 2009).
8.00 am  Registration at Meeting Point  
(Jurong East MRT Station, waiting point at Bus stop along Venture Avenue)

8.30 am  Depart to ICP Ulu Choh Factory by Coach

9.30 am  Introduction & Refreshment

ICP Product Attributes

- Spinning Process Results in more durable concrete with high resistance to corrosion

- Grade 90 concrete enables the piles to be driven through hard strata

- Can be manufactured up to dia. 1200 mm and a maximum single length of 46 meters.

- Environmentally friendly installation by hydraulic jacking equipment which are free of noise, air pollution and vibration.

About the Speaker

Mr. Loh Zhi Ming has been working for more than 8 years with Industrial Concrete Products Sdn Bhd (“ICP”). He graduated from University Putra Malaysia with a Bachelor of Engineering (Civil) in 2000. Since graduation, he is involved in the precast prestressed concrete pile industry. He was one of the Technical Committee members in the drafting of Malaysian Standard, MS 1413: 2004, Precast Concrete Piles.

He joined ICP in April 2004 as a Sales Engineer, and was posted to Jiangmen, China in 2006 to assist in the development of ICP’s first overseas plant.

Currently, he is the Senior Manager in ICP, managing the company’s sales in Klang Valley, overseas and the Design & Technical Services Team. He was also involved in the 2nd Penang Bridge Project during the design and construction of piled foundations.
REGISTRATION FORM
