Seminar on Eurocode 7 Geotechnical Design and Technical Reference for Bi-Directional Axial Load Test

This seminar is part of a series of seminars by the Building and Construction Standards Committee to keep the local industry informed of changes and new standards. The Eurocodes have been implemented in Singapore since Apr 2015. It has been a learning journey for the local industry. In 2017, BSI has revised the Eurocodes and Singapore has followed up with the revisions. The revisions in Eurocode 7 Geotechnical Design will be shared with the local industry in this seminar. More importantly, some revisions that depart from BSI need to be made based on local experience.

Variation Orders and Extension of Time Pertaining to A Construction Contract (6th Run)

Most disputes between contracting parties of construction contracts mainly concern two basic issues, namely: (1) Does an order given by the contract administrator constitute ordering the contractor to perform works which are beyond the scope of works initially stated in the contract at the time when it was signed? and (2) Should the Date of Completion initially stated in the contract at the time it was entered into be postponed without penalising the contractor? It is because of different answers are given to these two question by different contracting parties that gives rise to these disputes. The real cause is the lack of true and thorough understanding or complete misunderstanding of the terms and conditions of the contract the contracting parties have entered into.
Resulting from the aforesaid, considerable time and money have been unnecessarily spent in resolve these disputes; and in the course of doing so, lawyers have been enriched. This short course is organized with the view to help participants to establish such understanding.
