Variation Orders and Extension of Time Pertaining to A Construction Contract (6th Run)

Most disputes between contracting parties of construction contracts mainly concern two basic issues, namely:
(1) Does an order given by the contract administrator constitute ordering the contractor to perform works which are beyond the scope of works initially stated in the contract at the time when it was signed? and (2) Should the Date of Completion initially stated in the contract at the time it was entered into be postponed without penalising the contractor? It is because of different answers are given to these two question by different contracting parties that gives rise to these disputes. The real cause is the lack of true and thorough understanding or complete misunderstanding of the terms and conditions of the contract the contracting parties have entered into.

Resulting from the aforesaid, considerable time and money have been unnecessarily spent in resolve these disputes; and in the course of doing so, lawyers have been enriched. This short course is organized with the view to help participants to establish such understanding

Venue
IES Academy@ Jurong East 80
Jurong East St 21 #04-10 Devan
Nair Institute Singapore 609607

Date and Time
11 Sep 2018 to 11 Sep 2018
9.00am - 5.00pm
11 Sep, Tuesday

Managing Project Preparation for Climate Change Adaptation & Mitigation

With an increase in the adverse impacts of climate change worldwide, commitments made by the countries in the Nationally Determined Contributions (NDCs) as a lead up to COP21 in Paris, and limited national funds, countries have a pressing necessity to successfully tap into international climate funds in order to advance climate action. However, many countries in the Asia Pacific region still have limited capacity to formulate proposals to garner much needed finances for implementing projects on climate change mitigation and adaptation. This course will address these critical gaps through 3-day in-depth practical and interactive presentation and discussion, conducted by two experienced experts in the field, which will bring participants to a higher level of understanding of what constitutes an acceptable climate mitigation or adaptation project proposal and enhance their capacities to successfully manage the process of project identification and preparation to successful conclusion. The program aimed to equip participants with essential tools in crafting a roadmap to transform project concept into a project design document, which could later be developed into a full-fledged proposal to access suitable financing sources, from both domestic and international financial institutions
