INSTALLATION OF SERVICES AND CONDUITS WITHIN FIRE RATED DRY CONSTRUCTION IN BUILDING

SCDF has received feedback from QPs that it is common practice in the building construction industry to run services and conduits within fire rated dry construction. A dry (wall, floor, ceiling, column or beam) construction is tested to attain its fire resistance rating without services and conduits within it. Hence, incorporating services (with or without conduit) in a fire-rated dry construction is not an acceptable practice, as it will undermine the integrity and fire rating of the dry construction.

2. The circular serves to remind QPs of the need to comply with the fire code requirements. The practice of running services and conduits within dry construction is not permitted unless it is tested and complies with requirements of acceptable fire test standards.

3. Please convey the contents of this circular to members of your Institution / Association / Board. The circular is also available in CORENET-e-Info: http://www.corenet.gov.sg/einfo.

4. For any inquiry or clarification on this subject, please contact Mr Pang Tong Teck (SCDF) at Tel: 68481403, E-mail: Pang_Tong_Teck@scdf.gov.sg.
Yours faithfully,
(transmitted via e-mail)
