Amendment to the energy management requirements stipulated under the Energy Conservation Act (ECA) were published in the Government Gazette on 2 June 2017. Two of the new requirements for new ventures arising from the ECA amendment are slated to come into effect in October 2018, namely:

a) Energy efficiency opportunities assessment
b) Energy performance measurement

2. These new requirements will promote energy management discipline from the facility development stage for companies investing in new ventures with projected energy consumption of 54 tera-joules or more of energy annually. They will be required to review their new venture design for energy efficiency and also measure and report the energy performance of key energy-consuming systems. Through these measures, companies will potentially benefit from lower capital expenditure at the outset and reduced operating and maintenance costs over time from best practices such as right-sizing of facilities.

3. NEA has developed the detailed requirements and would like to consult industry stakeholders and gather feedback. We have scheduled two industry consultation sessions and the details are as follows:
