Gas pipelines play an integral support role in the transmission of power. Similarly, electricity cables serve as an important link in supplying reliable transmission and quality power to consumers. Hence, adhering to good practices in cable and gas pipe damage prevention during earthwork, is critical to prevention of disruption to power supply, potential financial loss and delay in project delivery. The Registered Earthworks Supervisor course aims to provide an overview of the relevant earthworks legislation and code of practice relating to construction earthworks carried out in the vicinity of the electricity cables/gas pipes. Participants will learn about the key requirements of the relevant legislation, control measures and good practices to prevent damage to the underground cables, gas pipes and services. Case studies will also be discussed.

**Venue**

BCA Academy, 200 Braddell Road, Singapore 579700

GOOD GOVERNANCE FOR MANAGEMENT CORPORATION (WITH ENHANCEMENT)

The increasing sophistication of property owners and their rising expectation for good governance in managing strata-titled developments could pose a daunting challenge to the management councils. It is important that members of the management councils of such developments are well-equipped with the knowledge of the regulatory framework and the related accounting and auditing requirements under the provisions of the Building Maintenance and Strata Management Act (BMSMA). At the end of the course, participants will gain an insight into the regulatory framework, the roles and responsibilities of the stakeholders in strata developments, the procedure in conducting general and council meetings of the Management Corporation, the by-laws of Management Corporation and the accounting & auditing requirements that govern the managing of strata property developments. Topics on budgeting, maintenance, management and sinking fund will be discussed. A module on handling disputes is included.

SPECIALIST DIPLOMA IN UNDERGROUND CONSTRUCTION

Land-scarce Singapore has historically looked to build both upward with taller buildings and outward by reclaiming land from sea. However, another area that Singapore could do more with, is its underground space. The underground space holds possibilities for creating additional subterranean transport hubs, pedestrian links, cycling lanes, utility plants, storage and research facilities, industrial uses, shopping areas and other public spaces. Developing competency in the area of underground construction is critical to realizing such subterranean construction projects. The Specialist Diploma in Underground Construction aims to equip contractors and consultants at the supervisory level with the knowledge in geotechnical design concepts, considerations and construction techniques so as to support increasingly complex and challenging underground construction projects.

BUILT ENVIRONMENT AND PROPERTY PROSPECTS SEMINAR 2018

The global cyclical recovery continues. Economies of China, USA and Eurozone are showing signs of recovery. Nearer to home, ASEAN economies such as Indonesia and Malaysia are projected to remain resilient, riding on healthy domestic demand and sustained improvement in exports. While the global economic recovery is expected to continue, global political risks remain from uncertainties over policies of the US administration and on-going Brexit negotiations. Against this backdrop, how will the built environment in Singapore perform in 2018? What are the opportunities, challenges and prospects for the Singapore built environment? How should companies prepare themselves during such unpredictable times? What should built environment firms look out for locally and beyond Singapore? Once again, the seminar brings together prominent economist, policy makers and industry experts to address these burning questions.

PRACTICAL APPLICATIONS OF WSH LEGISLATIONS IN CONSTRUCTION PROJECTS THROUGH CASE STUDIES

Statutory legislations such as Workplace Safety and Health Act (WSHA) and its subsidiary legislations are prepared by legal professionals. The structure of the legislation as well as various terms used in the legislation are not usually easily and fully understood in terms of their intent, meaning and implications by industry practitioners who either do not have legal background or only possess minimum legal knowledge. It is important that construction/project managers, supervisors and WSH personnel are educated with the better understanding of legal terms, implications of the WSH legislations, responsibilities of stakeholders, liabilities and penalties for non-compliances with respect to managing construction projects.
